

# Vibrating level switch

## Pulse function

"Pulse function" is a pulsive vibration to shake off the adhesion on the rod!

Although our tank is empty, the output signal doesn't turn OFF.  
We know that it is because the powder remains on the vibrating rod.  
Is there any solutions?

Why don't you try our "Pulse function"?

What is it?

It's a function that generates a pulsive vibration to shake off the adhesion on the vibrating rod.  
Check out this movie!  <https://youtu.be/jvO3HGGeA5w>

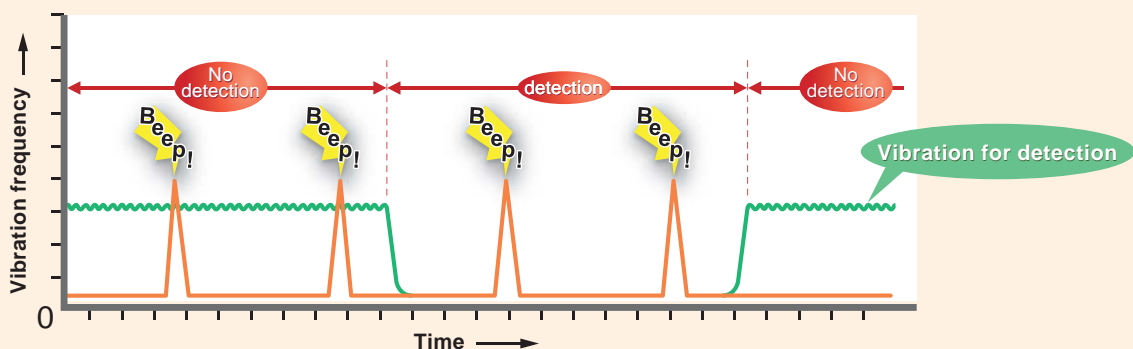

With this function, we can properly measure the powder level!  
We should try it!

Of course!

After repeated examination, we found the optimum vibration frequency and vibration interval for brushing off accumulated dust.

This function can be optionally equipped to all KVK · KVA · K VX · XV2 series!
