

We make our level switches to each application
with various sensor parts to choose from.

ALN

Capacitance Type Level Switch

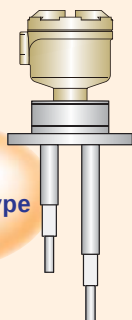

We have produced **over 1000**
electrode shapes over the years.

Capacitance Type Level Switch detects various
kind of powder, granule and liquid.
The shape and the material of the probe can be selected to each application.

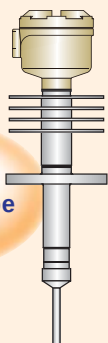

■ Lineup

Not only the shape but also the material is selectable.

Multipoint
detection type

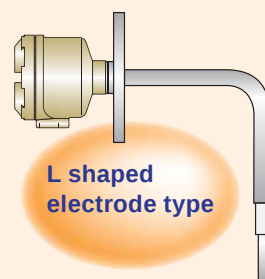

Ultra heat
resistant type

Non contact
detection type

L shaped
electrode type

■ Features

1 Adjustable detection sensitivity

Detection sensitivity is adjustable depending on the relative dielectric constant of the measuring material.

If you are not sure about the relative dielectric constant, please contact us so we can check it.

No Problem!

2 Automatic sensitivity compensation

Applicable to the measuring material which easily adheres on the detection part like highly viscous liquid.

3 Various surface treatments are available

Available depending on each application as options.

← Buffing

Teflon coating →

← Electro polishing
