

Not only downsize the housing!

Advantages of Remote amplifier type

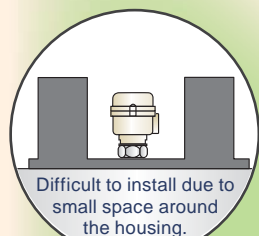

Remote amplifier type is often used in capacitance or vibration level switch. It has great advantages which the built-in amplifier type doesn't have. Here are the reasons for choosing Remote amplifier type!

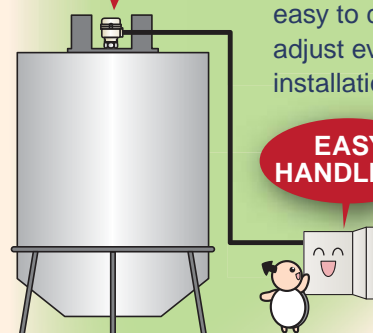

The vibration will be transmitted via the tank wall to the amplifier of the sensor.

Protect the amplifier from knockers or vibrators.

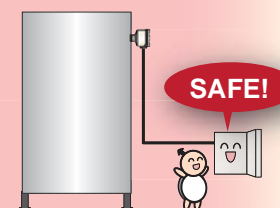

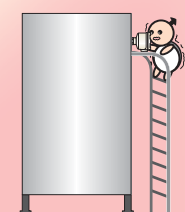

With compact type, easy to connect or adjust even at the limited installation spaces.

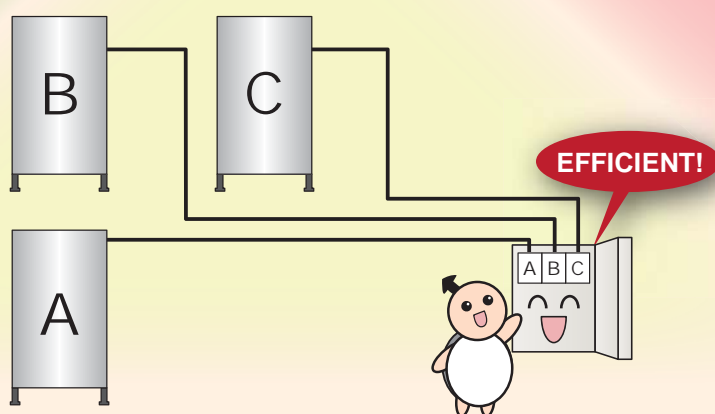

Advantages

Avoid working at dangerous locations such as a high installation location.

Save time to take for adjustment by mounting several amplifiers at one place.

Variation of housing

Standard remote amplifier type

Compact remote amplifier type
